UNIVERSITY WEBPAGE REDESIGN

My Role : UI/UX Designer | Research | Visual Design
Duration : 2 weeks
Tools : Figma, Photoshop

A complete reimagining of my university's platform designed for clarity, comfort, and connection. Every interaction aims to make student life simpler and more delightful.

BAPUJI INSTITUTE OF ENGINEERING AND TECHNOLOGY
Affiliated to Visvesvaraya Technological University, Belgavi, Accredited by NBA and NAAC with 'A' grade,Recognized by UGC under 2(F) and 12(B)

PROJECT OVERVIEW

Title : 🎓 University Webpage Redesign
Purpose : Redefining my university's digital presence through a user-centered redesign that blends simplicity, purpose, and modern design thinking.
Duration : 2 weeks | Solo Project
Tools Used : Figma, Photoshop

The project focuses on enhancing the user experience of my university's official website by creating a cleaner interface, simplifying navigation, and presenting essential information in an intuitive, visually engaging way. The goal was to make it easier for students, faculty, and visitors to access key resources, while maintaining the university's identity and professionalism.

PROBLEM STATEMENT

The existing university website felt cluttered and outdated, overwhelming users with too many navigation options and inconsistent layouts. Important information like courses, faculty details, and campus updates was difficult to locate. The typography lacked hierarchy, and the overall interface suffered from poor visual balance and limited use of CSS styling, making the experience confusing and visually heavy.

KEY ISSUES IDENTIFIED

- Overcrowded menus with repetitive and unclear labels.
- Inconsistent typography and lack of visual hierarchy.
- Outdated design aesthetics with minimal CSS styling.
- Homepage overloaded with links acting as a single navigation hub.
- Poor accessibility and no clear information flow.

USER RESEARCH

To better understand user pain points, I gathered feedback from students and faculty members who frequently used the site.

Key insights included:

- Students struggled to locate notices, results, and academic resources quickly.
- Faculty members found the admin and department pages difficult to access.
- New visitors (like applicants) couldn’t form a strong first impression due to outdated visuals.

IDEATION & WIREFRAMES

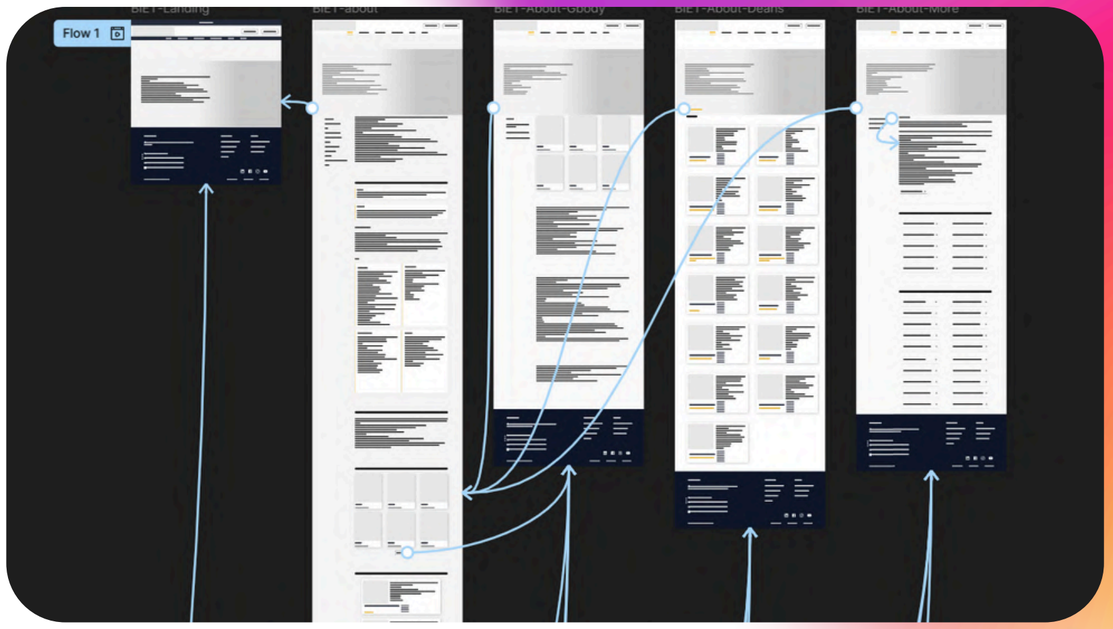

BRAINSTORMING

Explored ways to make the university website more intuitive, accessible, and aligned with a modern academic tone. The focus was on reducing clutter and improving navigation.
Key Ideas:

- Quick Access Tiles
- Simplified Navigation
- Improved Typography
- Dynamic Announcements

DESIGN RATIONALE

The redesign focused on clarity, simplicity, and usability. By maintaining consistent visual patterns and introducing hierarchy through typography and spacing, users can now locate key information within fewer clicks. The minimal interface allows content to stand out, while the improved navigation system enhances accessibility and reduces cognitive load.

Created a structured set of low-fidelity wireframes outlining the key website flows from the landing page to various “About” subpages. Each wireframe defines clear navigation paths and consistent component placement to ensure smooth user transitions. The layout emphasizes simplicity, visual hierarchy, and easy access to key sections. This helped validate the redesigned information flow before moving into high-fidelity prototyping.

FINAL DESIGN & PROTOTYPE

Designed detailed, high-fidelity prototypes for key pages including Home, About, Faculty, Campus, and More. Each page was structured using a consistent grid system and visual hierarchy to enhance readability and user flow.

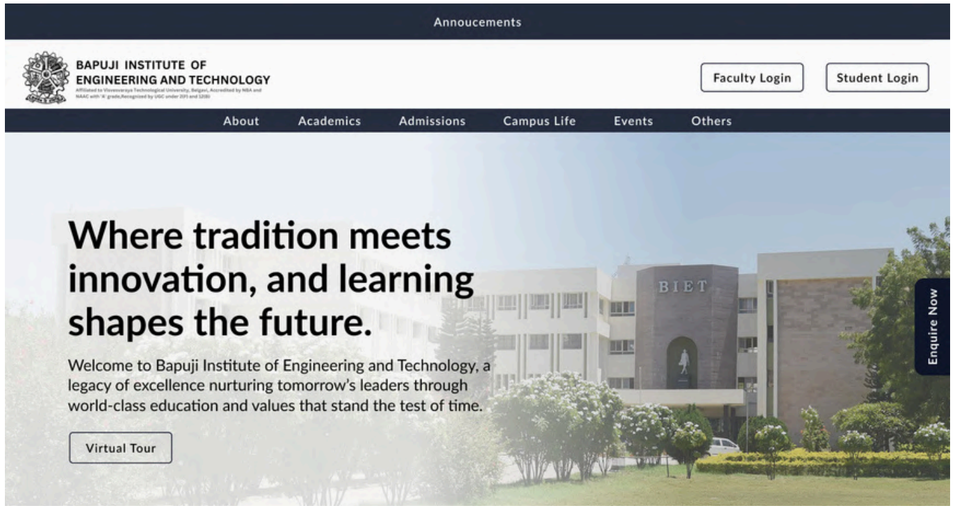

Key Improvements:

- Simplified overall navigation flow, reducing multiple redirects into three clear interaction steps.
- Established a clear visual hierarchy through consistent typography, spacing, and alignment.
- Introduced interactive features on the Home screen such as quick-access tiles for notices, admissions, and results.
- Improved responsiveness and accessibility, ensuring smooth usability across devices.
- Created a cohesive modern visual identity that aligns with the university's brand while delivering a clean, professional interface.

RESULTS & LEARNINGS

Design Impact

The redesigned website achieved a smoother and more intuitive navigation experience, allowing users to access information much faster. In mock user testing, participants were able to find pages like Results and Admissions 40% quicker than before. The simplified structure and clean visuals received positive feedback from peers and faculty, especially for its clarity and modern feel.

Challenges Faced

Balancing functionality and minimalism was a key challenge ensuring all important links were visible without overcrowding the interface. Finding the right tone between academic formality and modern design also required several iterations.

Key Takeaways

- Understood the importance of early usability testing to validate design decisions.
- Learned how information hierarchy and navigation flow can drastically improve user experience.
- Gained experience in translating user research insights into practical UI improvements.
- Strengthened my ability to blend technical structure with creative design for real-world use cases.
